Allowable Subject Matter

1. Claims 1-26 are allowed.
2. The following is an examiner's statement of reasons for allowance:
Matsuo (US Pat. 6,320,185) teaches detection of the rotational speed of a disk; a pulse signal b is generated each time one of the 10,000 pin holes (on the disk's periphery) is detected by the photodetector. Busch (US Pat. 5,612,544) teaches the determination of the mark's transverse position along the axis of rotation of the rotating body. Reider (US Pat. 5,332,895) teaches a system of detecting the number of rotations of a first disk based on the rotational angle of a second disk. However, neither of these references nor any of the prior art of record disclose in their entirety the claimed rotational phase difference detecting system for detecting a rotational phase difference between a plurality of rotating bodies, comprising: a method of detecting a first mark provided on a first rotating body; imaging and displaying a second mark provided on a second rotating body, when the first mark is detected; and detecting a rotational phase difference between the first and second rotating bodies from a position of an image of said second mark.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
